HeirStory SM

PROPRIOCEPTION ENHANCER

Caution
Do not use for applications other than those indicated in the information leaflet.

Use
The Medical Device (MD) is an electromagnetic support which performs an adjuvant action in the reduction of musculoskeletal pain, facilitating the selective de-contraction of the muscular apparatus.
The product is favorably used in all treatments where discomfort is mild and medium. Non-significant benefits are recognized in the case of pathologies where an advanced degradation and inflammation process is underway and which, necessarily under medical supervision, are destined to be subjected to pharmacological treatment.
Through the prevailing mechanical action exerted, the MD allows a reduction of painful symptoms, giving a sensation of relief of the joints, allowing greater mobility and flexibility of the musculoskeletal system.
The antalgic effect also at the level of the axial structures is secondary to the recovery of a good postural balance "deprived" or partly deprived of dysfunctional adaptations and a better redistribution of the muscular tonic activity.
The Quantares system is not suitable to be effective in acute painful pathology (post-traumatic, dysmetabolic, neoplastic) and cannot replace conventional pharmacological treatment.

Description
The system can support improvement of the postural structure and facilitate the execution of movements of the head on the trunk, the leveling of the iliac crests, the rebalancing of the dysmetria of the lower limbs and the increase of the flexibility of the trunk on the pelvis.
It can also facilitate the search for a good mandibular centric, acting mainly on the anomalous distribution of muscle tension involved in the masticatory process. All this is configured as a recovery of the neurophysiological parameters of proprioception and therefore of individual posture.

Composition
The circuits of the Quantares system consist of many different elements, of which the most important are nanocrystals called "Quantum Dots" and graphene both functionalised to be chemically linked with each other. The casing is made with the following materials: PVC and PET.

Package
Casing including the device accompanied by the information leaflet.

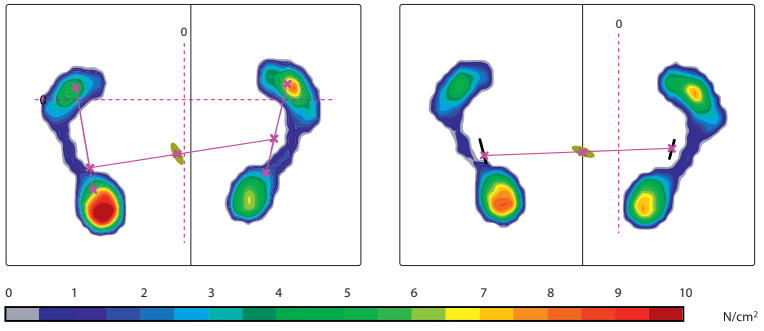
Functioning
When the MD is applied, the "Quantum Dots", indirectly activated by body heat and ambient light, emit photons of precise wavelengths. Thus transmitting information that induces new postural patterns.

- *The device does not cause any side effects.*
- *It can be used continuously according to personal need.*
- *The product can be also used for long periods based on the user's personal condition.*
- *It produces immediate effects verifiable through proprioception tests, but the most important benefits are shown progressively after at least a week of treatment.*
- *It does not interact with possible pharmacological therapies.*

Methods of disposal
Do not dump into the environment, it is recommended to dispose of it as an electronic material at designated collection centers.

Methods of storage
Store in a cool and dry place, away from excessive heat sources.

STATIC TEST – AVERAGE FORCE DISTRIBUTION



Methods of use

Remove the protection of the adhesive part.
Apply the bracelet around the wrist with the Q-on writing facing outwards.
Overlap the adhesive side facing inwards according to the size of the wrist, ensuring that the device is tight but comfortable and does not compromise circulation. The application points are discretionally identified by the user at individually selected points.
Removal of the device affects the tightness of the adhesive. If necessary, the adhesive can be replaced without compromising the functionality of the device.

Warnings and Contraindications

- Do not use on impaired or damaged tissue.
- Do not use if the package is open or if the product is damaged.
- Do not swallow.
- Use by the children is not limited, but use under adult supervision is recommended.
- Keep out of reach and sight of children who are not users of the product.
- Do not sterilise.
- There are no known interactions with drugs and medicinal substances.
- Although the device - as far as known - does not generate electromagnetic interference with other products and/or medical devices of any kind, it is recommended not to wear the device in case of diagnostic tests.
- There are no known contraindications resulting from contact with the external casing of the device; however, in case of subjective skin reactions, it is recommended to suspend the treatment and seek medical advice.
- Store away from heat sources.
- When worn, exposure to sunlight and ambient light favours the operation of the device.
- In case of deterioration of the casing, dispose of it correctly.
- Duration up to 4 months, from the time of application, depending on the mode of use.
- The device can be used in fresh or salt water and in all daily activities.
- Some creams, perfumes, solvents and sweat with aggressive pH can damage the device.

Maintenance

The device does not require maintenance. Clean with water and non-aggressive products, also the side in contact with the skin.
